

TagStar Pro

A RUGGED HAND-HELD READER AND ENCODER FOR RFID SYSTEMS

FEATURES AND BENEFITS:

- Weatherproof IP68 design
- Integrated RFID
- Windows mobile/Andriod OS
- Remote device management via web interface
- UK-based support and repair centre available

APPLICATION:

Retailers and Industries are adopting EPC Gen 2 RFID technology to manage inventory and assets. Tag Star is designed to enable simple and accurate tagging of inventory in accordance with data standards.

Correctly encoding RFID tags is one of the key areas that causes significant concern to stakeholders in any RFID project. Errors during coding of tags can lead to catastrophic failures in data integrity. TagStar has been developed by Coriel to allow clients to take ownership of this most crucial task in any RFID solution deployment.

TagStar allows users to pre-define the data structure using a simple web service and use this information to correctly encode RFID tags without errors. This is appropriate to any project involving identification of returnable transport items (such as roll-cages, totes, containers, boxes, etc.), assets (such as laptops, server blades, generators, IC Pumps, etc) and serialised products (components, parts, etc)
